Emerging technology trends, changes to business strategy or realignment of goals makes it increasingly challenging to keep your company's information technology services optimized. Today's business leaders need to be able to support constant business change while also implementing technology to lower costs and become more efficient, all while operating in a secure environment.

Selecting the right IT partners has never been more important to achieving business success. Talisen's Professional Services combine industry skill, knowledge and experience to provide flexible and comprehensive consulting support for design, deployment and management of technology systems. Talisen works with our customers to design holistic solutions that leverage existing systems or implement and transition to new technology.

Initiate	Plan	Develop	Maintain	Manage
Business Strategy	User Requirements	Solution Development /	Deployment	Optimization
Requirements Definition	Logical Design	Customization	Systems Operations	Reporting
Analysis	*Pilot*	*Baseline*	*Validate*	
Systems Analysis	Physical Design	Integration	System Monitoring	Quality Review
Solution Design	Data Model	Data migration, Unit & UAT Testing	Performance Scalability	Modernization Retirement

Our professional services add value to our business partners by providing a full range of services from strategy and architecture through development, implementation and support. As a full life cycle partner we bring a disciplined, agile and proven approach using industry methodologies and best practices to deliver consistency and quality throughout the engagement.

Our goal is to maximize the value that Information Technology systems deliver to the business.

Talisen Professional Services provide the needed resources to execute challenging programs and projects whether your company is looking to augment project teams or lacks a specific skill set with the desired expertise. Our approach is to use a highly collaborative process designed to identify and assess your current business processes and applications and to jointly develop a business based technology plan to achieve targeted goals.
