CUSTOMER & SUPPLIER DATA TRANSMITTAL (CSDT)

Looking to securely streamline the requirements management process?

The Talisen solution offers an end-to-end supply chain system integrating data items and milestone schedules from the government to contract companies via secure role-based access.

The Customer & Supplier Data Transmittal (CSDT) application automates the submittal contract process for CDRL (Contract Data Requirements List) and SDRL (Supplier Data Requirements List), while reducing errors cost and cycle time. The application strengthens supply chain for government agencies, contractors, suppliers and supports data chain of custody.

Business Case:

CSDT provides full data management of contract deliverables with partners and suppliers. The integration to PLM, ERP, and CRM systems allows your business to streamline the complex, and often changing, supplier data and contract data requirements delivery process.

CSDT has over $36,000,000 in documented savings.

MANAGE DATA DELIVERABLES:
Electronic workflow for review, comments and approval, variable workflow for different submittal types, virtual document storage, automated reports and metrics.

HISTORICAL DATA RETENTION:
Strengthens the supply chain between government agencies, contractors, and suppliers through secure communications and storage for historical data chain of custody.

TRACK & VIEW PROCESS:
Integrates data items and milestone schedules from the government organization to contract companies and down to the associated suppliers.
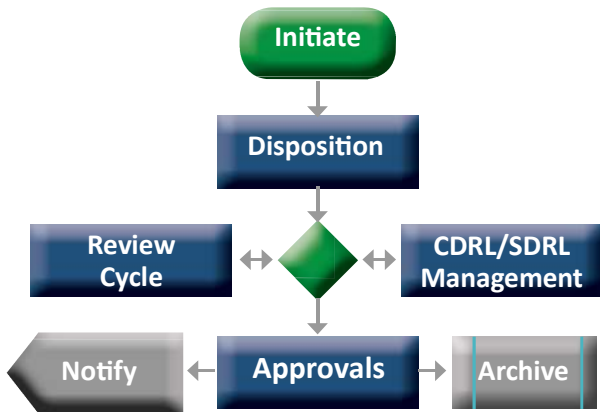

SINGLE SYSTEM:
Cloud-based or on-premise, manages data deliverables, auto notifications, milestone integration, visibility of schedule performance, document status and CDRL/SDRL mapping.

STREAMLINING THE INFORMATION EXCHANGE PROCESS

The CSDT system provides off-the-shelf, web-based software that streamlines the process of securely exchanging information between government organizations, contractors and their suppliers.

CSDT has an easy to use interface and common workflow engine that reduces the cost of CDRL and SDRL document review and management. Its highly extensible architecture allows for custom configurations to meet your business process needs.

This industry leading solution provides visibility of schedule performance, document status, process health and submittal information utilized in the customer and supplier requirements process for both CDRLs and SDRLs.

LEADING EDGE TECHNOLOGY

CSDT's advanced functions and features help automate the CDRL and SDRL submittal and contract management process, reduce errors and cost, and strengthen the supply chain for government agencies, contractors and their suppliers.

1 Automated Workflow, Notifications and Alerts, Audit Log Tracking

2 Electronic sign-off Integrated DID (Data Item Description) Repository

3 Integrated CDRL/SDRL Management, CDRLs and SDRLs linkage to Milestones

4 Visibility of Schedule Performance, Document Status, Process Health

5 Document Disposition, Document Markup and Aggregation of Comments

6 Generation of DD 1423 Forms

7 Repository and Version Control, Contract Correspondence Management

8 Advance Analytics & Metrics with Customizable Reporting
